Légende des symboles et du format des noms des taxons

Symbole	caractère typographique	Signification
0	normal	esp_ce indig_ne, naturalis_e ou en voie de naturalisation
↓	normal	taxon (potentiellement) invasif (listes noire et grise), y compris des esp_ces pas encore naturalis_es
	x normal	taxon hybride
С	petits caract_res	esp_ce cultiv_e, que l' on trouve souvent comme (sub)spontan_e ou adventice
?	gras	pr_sence du taxon incertaine (_ rechercher) ou statut incertain
☆		taxon pr_sum_ disparu (EX)
	italique	Infrataxon : sous-esp_ce (vari_t_)
	encadr_	taxon (partiellement) prot_g_ en R_gion wallonne
	ares ou menac_s ter la p. 4)	s pouvant faire l'objet d'une surveillance des populations
	gras	NT, VU ou DD (data deficient)
	gras	EN, CR, EX

Remarques:

- Cas particulier : si un seul infrataxon est présent en Région wallonne, le nom de l'espèce est suivi d'une virgule et du nom de l'infrataxon. (Ex : *Aconitum lycoctonum* n'est connu en Région wallonne que par la sous-espèce *vulparia* ; il est donc noté "**Acon lyco, vul").**
- Il est inutile de cocher le nom de l'espèce si l'infrataxon a été identifié.
- La liste des hybrides n'est pas exhaustive!
- Les groupes systématiques complexes n'ont pas été traités ici (par ex. *Rubus*, *Taraxacum*). Pour certains groupes, il est possible de cocher une case « s. » (section) « gr. » (groupe) ou « sg. » (sous-groupe).
